

Introducing Lechler's latest nozzle for broadacre spray booms

LECHLER XDT TWIN FLAT FAN NOZZLE

The new XDT twin flat fan stands for “**Extreme Drift reduction Twin fan**” for even higher drift reduction and optimised coverage. The nozzle-in-cap design is available in ISO sizes 02 (Yellow) to 08 (White) and fits all MULTIJET bayonet systems. A basket screen separates dosing and atomization, so the XDT is well suited for PWM systems. Thanks to the wide pressure range from 1.5 to 8 bar, the XDT can be operated for multiple applications with high drift reduction. Droplet sizes range from Ultra Coarse to Extremely Coarse. Symmetric angling of the 130° spray pattern with 40° to the back and front avoids spray shadow and guarantees the best coverage on vertical targets.

	Size range from 02 (Yellow) to 08 (White)		Spray angle 130°
	Pressure range from 1.5 to 8 Bar		Recommend filter size, 50 mesh (02-04) and 32 mesh (05-08)
	Droplet sizes range from Ultra Coarse to Extremely Coarse		

Available in Australia from Dr Nozzle from February 2022.
